

David Yocum

Director of IT
Bellus Academy

"I can't say enough about the FIT Solutions team. In the fast pace of our business I needed a first class team that understood our needs and our structure of my team, wearing multiple hats in our day-to-day operation."

Support & Service

"Their support of our network and vision for improving our hardware to increase productivity at a cost we can afford has been **a HUGE win for me as an IT Director**. They are quick to respond day and night and that alone is "A" in my book for customer service. BUT, they go above and beyond supporting our network."

Compliance

"Recently we had some new requirements for our cyber security that made me pause with some concern for how we would meet these changes. Not only did they organize a meeting to review our new regulations, **they came to the meeting with solutions that quickly eased my mind and ensured me with GREAT confidence that we would be successful** with our compliance."

Business Planning

"Their quarterly meetings to review our systems and security are **the most well planned-out meetings I have experienced** in network support. They plan and they execute in addition to their support of my team when an IT issue arises."

Account Management

"Our account leader not only organizes our meetings and oversees our accounts, **she is beyond attentive to our ongoing needs** and prepares meetings that are well thought out and planned for success. Thanks to our Account Manager; she's the best of the best."

Preventative Maintenance

"Engineer support is handled by well trained and experienced professionals. I give a special thanks to those I work with daily. Their focus on preventing issues is even more appreciated as **they have greatly reduced our work tickets by planning preventive measures** that can only be achieved by taking the time to understand our business at a very focused vision."

24/7 Cybersecurity

"Cyber security is a HUGE responsibility when you are dealing with client information and personal data. I can safely say **I sleep well at night knowing the FIT Cyber team is overseeing these needs and executing at the highest level** with a designed plan for staff training that puts our staff on the front line of data protection, keeping them informed of the latest threats and defense so we can prevent loss of client data."
